

Special Report: Immunity & Reversing Cancer

**Author Jeff Primack is not a Doctor. *Info is not intended to replace medical advise*

A tumor is made by the body to "package" harmful toxins away from the organs. After meeting so many cancer patients at my seminars and learning what works and doesn't... my strategy has become refined and is very specific. When someone is dealing with cancer (or seeking prevention) the two actions that must be taken are: 1) Boost immune system 2) Detoxify the body

The *SSQ Cancer Reversing Protocol* has been very successful. Asparagus is part of the strategy. It has more GLUTATHIONE than any other known food. Glutathione is a phytochemical that increases "Phase 2 detoxification". People with low glutathione levels are far more susceptible to getting cancer. Some forms of alternative treatment involve getting glutathione injections. The results are ok, but not as impressive as eating lots of asparagus. It is a powerful food to fight existing cancer or simply prevent it. Asparagus works best light steamed, rather than raw. The cancer protocol calls for eating asparagus everyday in addition to other high-phytochemical foods, herbs, healing mushrooms & smoothies.
